Produced Water Treatment Field Manual-Maurice Stewart 2011-07-13
Produced Water Treatment Field Manual presents different methods used in produced water treatment systems in the oil and gas industry. Produced water is salty water that is produced as a byproduct along with oil or gas during the treatment. Water is brought along with the oil and gas when these are lifted from the surface. The water is then treated before the discharge or re-injection process. In the introduction, the book discusses the basic terms and concepts that describe produced water treatment. It also presents the different methods involved in the treatment. It further discusses the design, operation, maintenance, and sizing of the produced water treatment systems. In the latter part of the book, the ways to remove impurities in water are discussed, including choosing the proper filter, filtering equipment, filtering methods, and filtering types. The main objective of this book is to provide information about proper water management. Readers who are involved in this field will find this book relevant. Present a description of the various water treating equipment that are currently in use Provide performance data for each unit Develop a "feel" for the parameters needed for design and their relative importance Develop and understanding of the uncertainties and assumptions inherent in the design of the various items of equipment Outline sizing procedures and equipment selection

The Sciences of Homosexuality in Early Modern Europe-Kenneth Borris 2013-01-11 The Sciences of Homosexuality in Early Modern Europe investigates early modern scientific accounts of same-sex desires and the shapes they assumed in everyday life. It explores the significance of those representations and interpretations from around 1450 to 1750, long before the term homosexuality was coined and accrued its current range of cultural meanings. This collection establishes that efforts to produce scientific explanations for same-sex desires and sexual behaviours are not a modern invention, but have long been characteristic of European thought. The sciences of antiquity had posited various types of same-sexual affinities rooted in singular natures. These concepts were renewed, elaborated, and reassessed from the late medieval scientific revival to the early Enlightenment. The deviance of such persons seemed outwardly inscribed upon their bodies, documented in treatises and case studies. It was attributed to diverse inborn causes such as distinctive anatomies or physiologies, and embryological, astrological, or temperamental factors. This original book freshly illuminates many of the questions that are current today about the nature of homosexual activity and reveals how the early modern period and its scientific interpretations of same-sex relationships are fundamental to understanding the conceptual development of contemporary sexuality.

Eternal Light-Paul McAuley 2010-12-30 In the aftermath of an interstellar war an enigmatic star is discovered, travelling towards the Solar System from the galactic core. Its appearance adds a new and dangerous factor in

the turbulent politics of the inhabited worlds as the rival factions - the power-holders of the ReUnited Nations, the rebels who secretly oppose their power, and the Religious Witnesses - all see advantages to be gained. But what awesome technology started the star on its journey half a million years ago - and why?

The Devil's Only Friend-Mitchell Bartoy 2006-10-17 It is the fall of 1943, and the city of Detroit is doing its best to recover from the explosive race riots that marked the recent summer. The police are working overtime to protect the auto plants and ensure that their massive machinery continues to churn out the steel that comprises America's lifeblood overseas. Pete Caudill, late of the Detroit detective squad, is passing the time sitting on the fire escape of a squalid rented room, consumed by the ghosts of his past, including the black teenager he shot and killed years ago and a similar boy whose life he saved in the recent riots. When a young woman distantly connected to Caudill is murdered, her blood threatens to stain the reputation of the Lloyd family, scions of Detroit's all-powerful auto industry. Caudill himself has a certain reputation with the Lloyds, plus a direct link to the complicated man who runs the company and, some say, the city of Detroit itself. As a desperate investigation unfolds and the war effort rages on, the tentacles of a menacing conspiracy reach deep into the soul of the powerful Lloyd family and threaten to squelch the very heart of American patriotism beating within. It's up to Pete Caudill, using whatever meager resources he can assemble, to put down the sinister forces working against the Lloyds, perhaps in the process preserve America's chances in the war—and discover an unexpected second chance at his own life.

Introductory Notes on Valuation Rings and Function Fields in One Variable-Renata Scognamillo 2014-07-01 The book deals with the (elementary and introductory) theory of valuation rings. As explained in the introduction, this represents a useful and important viewpoint in algebraic geometry, especially concerning the theory of algebraic curves and their function fields. The correspondences of this with other viewpoints (e.g. of geometrical or topological nature) are often indicated, also to provide motivations and intuition for many results. Links with arithmetic are also often indicated. There are three appendices, concerning Hilbert's Nullstellensatz (for which several proofs are provided), Puiseux series and Dedekind domains. There are also several exercises, often accompanied by hints, which sometimes develop further results not included in full for brevity reasons.

Red Queen-Jeb Kinnison 2014-12-09 They fought their governments... to free the world! RED QUEEN is a science fiction thriller set in the US of a not-too-distant future, when the Bill of Rights is ignored and the US is run by the Unity Party, combining the worst of Democrats and Republicans. Red Queen is a story about young people searching for freedom and agency in a world dominated by bureaucrats, administrators, and propagandists. The world of Red Queen is a police state with its roots in today's events: post-9/11 warrantless physical and electronic surveillance; the erosion of personal liberties for supposed security reasons, even when the government's actions are shown to be ineffective or wrongheaded; and the rise of a penal-industrial complex that imprisons one in three black men, often for victimless crimes. When the next terrorist action occurs, there may be calls for even more restrictions on freedom and privacy. That's where Red Queen begins. JUSTIN SMITH is a grad student studying simulated biology. He was home-schooled and read the classics of economics and history. He recognizes the police state for what it has become, but also knows to keep his head down; STEVE DUONG is a child prodigy, self-taught in Vietnam, who has distinguished himself in mathematics and physics and is now researching advanced quantum computing. Steve makes the discovery that could change everything; SAMANTHA WEST is a daughter of West LA privilege, self-assured and knows what she wants-and she brings Justin into the cause; BEN RAMIREZ leads the Students for Liberty, a student civil liberties organization, and believes in the Constitution. This is Book 1 of the Substrate Wars series. The story starts on a California college campus just a decade from now. The world is post-terrorist disaster: repressive and censored, governed like China is today but with a stagnant economy and no jobs for young people. The students are cowed but not unaware, and they seize an opportunity when the government's actions start to hit home even in academia. When they discover a new technology that could either free mankind or be the ultimate weapon for governments to control their citizens, they must decide what to do. Homeland Security and the Chinese government are one step behind; spies and traitors lurk in unexpected places. Who will determine how to use this great technology-free citizens or governmental bureaucrats?

Includes historical notes.

The Culture Industry Revisited-Deborah Cook 1996 Adorno viewed mass culture as commodified - produced to be sold on the market and without aesthetic value. Here, Deborah Cook critically examines this view and argues that even in Adorno's "pessimistic" theory, mass culture can be understood as potentially liberating.

The Two Walked on Together-Chaim Picker 2013-10 Chaim Picker, grandson of an orthodox cantor from White Russia, under the tutelage of his maternal uncle, left Judaism at the age of fifteen, becoming a Jehovah's Witness. The Zero-Carbon House-Martin Godfrey Cook 2011-09-16 Zero Carbon' is an abstract concept for most people, but we have lived energy-profligate

lifestyles for too long on finite fossil-fuel resources. We now face potential environmental catastrophe from climate change and global warming, with a continuing exponentially expanding global population that doubles every four decades. The capacity of the planet to reabsorb carbon dioxide is about two to three tonnes of carbon equivalent per person at current population levels of seven billion and therefore there is a desperate need for us to reduce our carbon footprint. A way of helping to achieve this is to live in a zero-carbon house, and this will become UK legislation for new homes by 2016. This fascinating book covers all aspects of the zero-carbon house, from its evolution to achieving carbon neutrality in old and new homes as well as entire communities. Includes an overview of zero carbon and how to achieve it on a global scale; covers communities of zero-carbon houses and provides inspirational examples of low-carbon lifestyles. Case studies show how principles are put into successful practice to save energy, carbon, money and the environment.

Radio-Controlled Model Aircraft-David Boddington 2004 Every weekend thousands of people across the world drive to open areas fly their radio-controlled aircraft. This book is designed to give the complete low-down on the hobby to enlighten those who haven't yet taken the plunge, and to further the knowledge of flyers who want to improve, and fly more complicated and exciting airplanes. David Boddington has been flying and writing about radio-controlled aircraft for decades, and he passes on a great deal of accumulated experience in this highly illustrated book. Describing all the major types of aircraft and flying—from indoor electric-powered kites to quarter-full-size multi-engine turbojets—this book is the perfect introduction to this enjoyable hobby.
